## Application

### Controller

The controllers CECC are modern, compact and versatile controllers that enable programming with CODESYS according to IEC 61131-3.

### State-of-the-art programming

CODESYS V3 pbF offers a user-friendly interface with the following new functions:

- Object-oriented programming
- Modern editors for simplified input
- Simplified configuration for fieldbus

- New configurator for IO-Link Master

- Multiple controllers in one project
- Improved troubleshooting function
- Simplified project navigation

### Basic functions of the CECC-D

The controllers CECC (CECC-D) offer the following basic functions:

- 12 digital inputs, 8 digital outputs, additionally 2 high-speed counters up to 250 kHz
- Ethernet 10/100 Mbps, Modbus TCP client/server, EasyIP, TCP/IP, OPC server available

- CANopen master: connection of the electric drives
- USB interface for data transfer
- Can be connected directly with modern HMI devices: CDPX

### Additional functions CECC-LK

- This variant of the CECC offers four IO-Link masters and one IO-Link device interface
- The integrated IO-Link interface of the CECC-LK enables quick and easy connection of Festo valve terminals and sensors to a controller

- All modern, compact valve terminals from the CTEU series can be connected to IO-Link masters: VTUB, VTUG, MPA, CPV, VTOC and upcoming devices, as well as the input box CTSL

### Additional functions of the CECC-S

- 2 RS232 interfaces
- 1 RS422/RS485 interface, allows freely configurable communication with different devices
- The RS422 interface can optionally be used as an encoder interface. For this operating mode, there are numerous setting options on the encoder type, comparison functions and referencing
- In addition, the CECC offers an IO-Link master and an IO-Link device interface

### Fieldbus interfaces

The CECC-LK and CECC-S can be connected to a combination of CTEU nodes and CAPC on various fieldbuses via the IO-Link device interface:

- PROFIBUS
- EtherCAT
- DeviceNet
- CANopen
- AS-interface

### System configuration

The CECC can communicate with all electric drive controllers from Festo and actuate all valve terminals via CANopen. The CECC communicates via Ethernet with other controllers and operator units from Festo, such as the modern, new HMI device series CDPX and the camera SBOX-Q for image evaluation.

that the valve terminal can be adapted to suit different applications.

The modular system design lets you con-

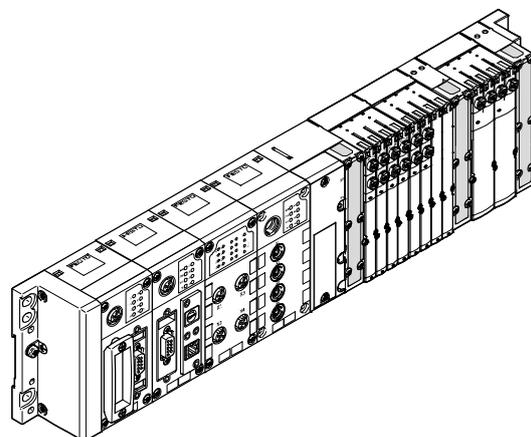

figure the number of valves, inputs and additional outputs to suit the applica-

tion.

With valve terminal – decentralised

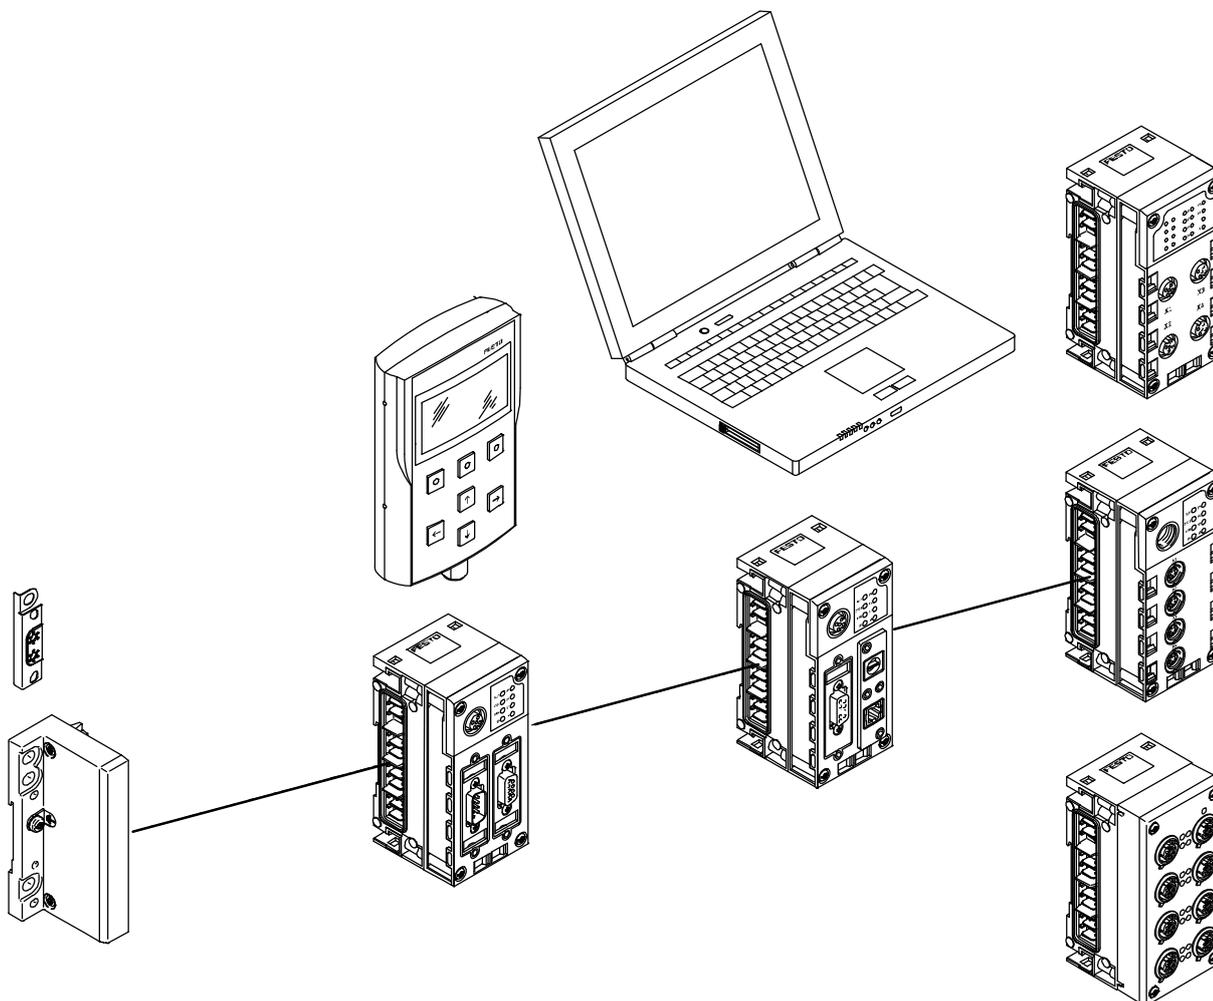

With valve terminal MPA-S – centralised
